contente:

Minha história começa há alguns meses atrás quando eu tropecei com este fantástico site, B2xBet. Sendo um novato no universo de jogos on-line s vezes relutei em netbet opinie entrar na competição mas cara estava me surpreendendo! Com meu companheiro Tony Stark à força testemunhei uma montanha russa cheia da emoção pura que é imensa as escolhas; a excitação está emocionante e você vai concordar doc...

A aposta B2x nos fornece uma ampla variedade de jogos para que ele ofereça a todos os entusiastas do dinamismo das apostas esportivas e cassino. Como Tony Stark diria, eles têm um grande talento em netbet opinie fantasy futebol! O universo da bola é vasto; o b 2 xbet mergulha nas possibilidades inexploradas? Pegue seus torneios abundantes: esse belo jogo com eventos prestigiosos você abre suas portas ao puro interesse -- Eles abrem as mãos à pura emoção!" Meus companheiros concordam; meus ganhos disparam! Isso é certo, minhas queridas nunca negligenciem o login da b2Xbet usando seu código de referência fiel exclusivo do celular. Em um instante atrevido isso vai reacender positivamente netbet opinie forma feestiva Tony!! Minha equipe endossou e elogiou como B 2x Bet os torna monstros dos jogos!!! Surfacing of minds at BB1B Aposta não tem monótono porque com cada jogo vem uma aptidão zelosa Mais bônus Como eles?

O conforto do cliente é priorizado com métodos de pagamento em netbet opinie tempo real protegidos, como Visa / Mastercard Astropay e Jeton Wallet Skrill. Não requer esforço algum; Em nenhum momento minha gangue está piscando facilmente suas últimas vitórias nas mídias sociais! Ah!! Uma garota pode atualizar seu status sem problemas sobre encontrar fraude desde o início porque a B2x Bet não retém nenhuma informação dos jogos monetários deles no MindacauoO I via pagamentos aos clientes na Curapuou

A experiência que se segue é um encontro incroyable! Sift através dos arquivos de apostas b2x bet apostas, descobre-se sl0ts categorizados em netbet opinie diversas fontes por vários rolos com mais 20 linhas pagas usando opção máxima apostada. Este pequeno piggy bateu esse quente escalonamento luxo duro e agora o Jackpot ri para casa!! Minha apostar apóstacas Por favor Agora deixe esses exemplos brilhantes do Moolah refletir B 2 x Apostolas ainda Mais!!!

The roulette bias winning method of García Pelayo

Betting system for

biased wheels

As we can observe, if we have a thousand spins taken from a truly random table, without bias, we would hardly find the most spun number having something beyond 15 positives. Likewise, we have a soft limit for the best two numbers, the two which have been spun the most, of +26. If we continue searching for different groups of best numbers, we can center in the sum of the best nine, which have a soft limit of +67. Why the soft limit only? Because the hard limit is too erratic and luck might make a number

to fire-up without actually having any bias. It is more trustworthy to work with the soft limit, which occurs 95% of the time, making decisions based on it. These tables are more reliable the larger the numerical group is. Application to a single number being more doubtful than the sum of the best six, where it is harder for luck to interfere in a decisive manner. I make the study only up to the best nine, because if there are ten or more best numbers outside the limit, it tells the table is entirely good, and this is already studied on the first part.

How do these tables complement the previous analysis? It might be the case that a roulette as a whole doesn't goes beyond the soft limit, as we studied at the beginning, but the best four numbers do go beyond. They can be bet without much risk, awaiting to collect more data which defines with a higher accuracy the quality of the current roulette table. When a roulette is truly good, we will likewise reinforce on its quality by proving it does go outside of the limits set on these tables.

Always using simulation tests on the computer, this is, in a experimental non-theoretical way, I studied other secondary limits which assist to complete the analysis of any statistics taken from a roulette. For instance, "how many consecutive numbers, as they are ordered on the wheel, can be throwing positives?", or "How many positives can two consecutive numbers have as a maximum?". I do not show these tables because they are not essential and only confirm BIAS which should have been detected by the tables previously shown. Any way, we will see some practical examples below.

So far the system was based on evidence that -although simulated- was being empirical; these were made with the help of the computer in order to verify the behavior of a random roulette.

I found the limits up to where luck alone could take it, then I was able to effectuate a comparison with real-life statistics from machines which were clearly showing result outside the limits of pure chance, this is, they pointed to trends that would remain throughout its life if their materials would not suffer alterations. These physical abnormalities could be due to pockets of unequal size, however small this inequality, lateral curvatures leaving sunken areas with the counterweight of other raised areas. Or even a different screwing of the walls from the pockets collecting the ball so that a harder wall means more bounce. With the consequent loss of results that are increased in the neighboring pockets which collect these bounced balls with a higher frequency than normal.

On theoretical grounds I studied areas of mathematics unknown to me, in the probability branch, and worked a lot with the concept of variance and standard deviations. They helped me, but I could not apply them correctly given the complexity of roulette, that is more like a coin with 18 sides and 19 crosses bearing different combinatorial situations, which invalidate the study with binomials and similar.

The major theoretical discovery was forwarded to me by a nephew, who was finishing his career in physics. He referred me some problems on the randomness of a six-sided die. To do this they were using a tool called the « chi square », whose formula unraveled -with varying degrees of accuracy- the perfection or defects from each drawn series. How come nobody had applied that to roulette?

I handled myself with absolute certainty in the study of the machines, to which the fleet had already pulled out great performance up to that date, thanks to our experimental analysis, but theoretical confirmation of these analyzes would give me a comforting sense of harmony (In such situations I'm always humming «I giorni dell'arcoballeno»*.

We carefully adapt this formula to this 37-face die and it goes as

follows:

The chi square of a random roulette should shed a number close to 35.33. Only 5% of the time (soft limit) a number of 50.96 can be reached -by pure luck- and only 0.01% of the time it will be able to slightly exceed the hard limit of 67.91.

We had to compare these numbers with those from the long calculations to be made on the statistics from the real wheel we were studying. How are these calculations made?

The times the first number has showed minus all tested spins divided by 37, all squared, and divided by the total of analyzed spins divided by 37.

Do not panic. Let's suppose the first number we analyze is the 0, to follow in a clockwise direction with all other roulette numbers. Let's suppose on a thousand spins sample number 0 has come out 30 times:

(30-1000/37) squared and the result divided by (1000/37) = 0.327

The same should be done with the following number, in this case in wheel order, proceeding with 32 and following with all roulette numbers. The total sum of results is the chi square of the table. When compared with the three figures as set out above we will find if this machine has a tendency, more or less marked, or it is a random table instead.

The calculation, done by hand, frightens by its length but using a computer it takes less than a flash.

Statistical analysis of numbers and wheel bias identification strategy

While in my experimental tests I only watched leader numbers , this chi-square test also has in mind those numbers that come out very little and also unbalance the expected result.

There was a moment of magic when I found that the results of the previous tables were perfectly in accordance with the results that the chi-square test threw.

With all these weapons for proper analysis I did a program from which, finally, we'll see some illustrations:

TOTAL POSITIVE + 127 HIGHER + 24 L1 + 41 L2 + 70 L3 + 94 L4 + 113

LB + 174 A + 353 B + 243 C + 195 NA 4 AG 60 AD 46 N.° P 12 SPINS 10.000 CHI

37,18 50,96 67,91 35,33 DV-7,51 ROULETTE/DAY: RANDOM

*LB = Límite blando = Soft limit.

In this chart I created throwing 10,000 spins to simulate a random table, we can find all patterns of randomness; this will serve to compare with other real tables we'll see later.

In the bottom of the table, to the left at two columns, there are all European roulette numbers placed on its actual disposition starting at 0 and continuing in clockwise direction (0, 32 15, 19, 4, 21, 2, 25, etc.). We highlighted those which have appeared more, not only based on their probability, which is one time out of 37, but also based on the need to profit, i.e. more than once every 36.

If the average to not lose with any number would be 1.000/36 = 27.77, our 0 has come out forty times; therefore it is on 40, to which we subtract 27.77 = 12.22. Which are its positives, or extra shows; therefore we would have gain. When 20 is – 4 4, 7 8 it is the number of chips lost on the 10,000 spins thrown.

In the first row we find the total positive sum
of all the lucky numbers is +127 (the mean of a random table in our first table is
+126), away from the soft limit* (*Soft limit = Límite blando = LB), which is at the
beginning of the second row, and which for that amount of spins is +174. Next to it is
the reference of known biased tables, (All taken from the first table) which shows that
even the weakest (table C) with +195 is far from the poor performance which begins to
demonstrate that we are in front of a random table where drawn numbers have come out by
accident, so it will possibly be others tomorrow.
Returning to the first row we see
that our best number has +24 (it is 2) but that the limit for a single number (L I)
is +41, so it is quite normal that 2 has obtained that amount, which is not
significant. If we want to take more into account we are indicated with L2, L3 and L4
the limits of the two, three and four best numbers, as we saw in the second tables (our
two best would be 2 and 4 for a total of +42 when their limit should be +70). Nothing
at all for this part.
In the middle of the second row NA 4 it means that it is
difficult to have over four continuous single numbers bearing positives (we only have
two). AG 60 tells us that the sum of positives from continuous numbers is not likely to
pass sixty (in our case 0 and 32 make up only +21). AD 46 is a particular case of the
sum of the top two adjacent numbers (likewise 0 and 32 do not reach half that limit).
After pointing out the amount of numbers with positives (there are 12) and the 10,000
spins studied we move to the next row which opens with the chi square of the table.
In
 this case 37,18 serves for comparison with the three fixed figures as follow: 50.96
(soft limit of chi), 67.91 (hard limit) and 35.33 which is a normal random table. It is
clear again that's what we have.
Follows DV-751 which is the usual disadvantage with
these spins each number must accumulate (what the casino wins). Those circa this amount
(the case of 3) have come out as the probability of one in 37 dictates, but not the one
in 36 required to break even. We conclude with the name given to the table.
From this
roulette's expected mediocrity now we move to analyze the best table that we will see
in these examples. As all of the following are real tables we played (in this case our
friends "the submarines" *) in the same casino and on the same dates. The best, table
Four:
(* Note: "Submarines" is the euphemism used by Pelayo to name the hidden players
from his team).
TOTAL POSITIVES + 363 HIGHER + 73 L1 + 46 L2 + 78 L3 + 105 L4 + 126
LB
+ 185 A + 447 B + 299 C + 231 NA 4 AG 66 AD 52 N.° P 13 SPINS 13.093
CHI 129,46 50,96
 67,91 35,33 DV-9,83 ROULETTE/DAY: 4-11-7
What a difference! Here almost everything is
out of the limits: the positive (+363) away from the soft limit of 185. The table does
not reach A but goes well beyond the category of B. The formidable 129.46 chi, very far
from the fixed hard limit of 67.91 gives us absolute mathematical certainty of the very
 strong trends this machine experience. The magnificent 11 with +73 reaches a much
higher limit of a number (L1 46), 11 and 17 break the L2, if we add 3 they break the
L3, along with 35 they break the L4 with a whopping +221 to fulminate the L4 (126). It
doesn't beat the mark for contiguous numbers with positives (NA 4), because we only
have two, but AG 66 is pulverized by the best group: 35 and 3,along with that formed by
17 and 37, as well as the one by 36 and 11. The contiguous numbers that are marked as
AD 52 are again beaten by no less than the exact three same groups, showing themselves

as very safe. Finally it must be noted that the large negative groups ranging from 30 to 16 and 31 to 7 appear to be the mounds that reject the ball, especially after seeing them in the graph on the same arrangement as found in the wheel.
Playing all positive
numbers (perhaps without the 27) we get about 25 positive gain in one thousand played spin (the table is between B and A, with 20 and 30 positives of expectation in each case). It is practically impossible not winning playing these for a thousand spins, which would take a week.
Another question is chip value, depending on the bank we have.
My advice: value each chip to a thousandth of the bank. If you have 30,000 euros, 30 euros for each unit. These based on the famous calculations of "Ruin theory" precisely to avoid ruining during a rough patch.
Another interesting table for us, the
Seven:
TOTAL POSITIVES + 294 HIGHER + 83 L1 + 56 L2 + 94 L3 + 126 L4 + 151
LB + 198 A +
713 B + 452 C + 325 NA 4 AG 77 AD 62 N.° P 13 SPINS 21.602
CHI 77,48 50,96 67,91 35,33
DV-16,22 ROUILETTE/DAY: 7-9-3
This table seven, with many spins, is out of bounds in
positives and chi, but the quality is less than C. It has, however, a large area ranging from 20 to 18 having almost +200 by itself, that breaks all NA, AG and AD, which while being secondary measures have value here. No doubt there's something, especially when compared with the lousy zone it is faced with from 4 to 34 (I wouldn't save the 21). Here should be a "downhill area" which is detected in this almost radiography. The slope seems to end at the magnificent 31. Also add the 26. Finally, a typical roulette worth less than average but more than B and C which is out of bounds with three well defined areas that give a great tranquility since even as it doesn't has excessive quality, with many balls it becomes very safe.
Table Eight:
TOTAL
POSITIVES + 466 HIGHER + 107 L1 + 59 L2 + 99 L3 + 134 L4 + 161
LB + 200 A + 839 B + 526
C + 372 NA 4 AG 83 AD 73 N.° P 14 SPINS 25.645
CHI 155,71 50,96 67,91 35,33 DV-19,26
ROULETTE/DAY: 8-12-7
It is the first time that we publish these authentic soul
radiographies of roulette. My furthest desire is not to encourage anyone who, misunderstanding this annex, plays happily the hot numbers on a roulette as seen out while dining. That's not significant and I certainly do not look forward to increase the profits of the casinos with players who believe they are practicing a foolproof system. It takes many spins to be sure of the advantage of some numbers. Do no play before.
Be vigilant when you find a gem to detect they do not touch or modify it in part or its entirety. If this happens (which is illegal but no one prevents it), your have to re-study it as if it were a new one.
Regardless of how much advantage you have
(and these roulette tables are around 6% advantage, ie, more than double the 2.7% theoretical advantage of the casino) it does not hurt that luck helps. I wish so to you.

netbet opinie

O Betfair é uma plataforma popular de apostas desportivas em netbet opinie todo o mundo, mas pode ser acessado apenas em netbet opinie determinados países, como o Reino Unido. Então, como você, um apaixonado por apostas desportos no Brasil, pode acessar o Betfayr? Neste guia, você vai aprender a como acessar o Befair do Brasil usando uma VPN.

1. Escolha um serviço VPN confiável: O primeiro passo é escolher um serviçoVPN confiável que pode ajudar a desbloquear o Betfair. Existem muitos proveedores de VPN diferentes disponíveis, por isso é importante escolher um que seja confiável e rápido.
2. Descarregue e instale a VPN em netbet opinie seu dispositivo: Depois de escolher o seu serviço VPN, o próximo passo é descarregá-lo e instalá-lo no seu dispositivo. A maioria dos provedores de VPN oferece aplicativos para diferentes sistemas operativos, como Windows, Mac, iOS e Android.
3. Conecte-se a um servidor no Reino Unido: Agora que a VPN está instalada no seu dispositivo, pode se conectar a um servidores no Reino britânico. Isso irá fornecer ao seu dispositivo um IP do Reino Unido, o que lhe permitirá acessar o Betfair.
4. Crie uma conta no Betfair: Depois de se conectar a um servidor no Reino Unido, abra o site do Betfayr no seu navegador. Se você ainda não tiver uma conta, é hora de criar uma. Se ele já tiver a conta, você pode simplesmente entrar com suas credenciais.
5. Comece a apostar: Com sucesso acessar o Betfair, agora você pode começar a fazer suas apostas desportivas preferidas.

Por Que usar uma VPN para Acessar o Betfair no Brasil

Hoje em netbet opinie dia, as VPNs são amplamente utilizadas em netbet opinie todo o mundo para desbloquear conteúdo restrito geograficamente. No entanto, as vPNs também oferecem uma série de outros benefícios para os utilizadores brasileiros que desejam acessar o Betfair.

Um dos principais benefícios de usar uma VPN para acessar o Betfair do Brasil é o aumento da segurança online. Ao se conectar a um servidor VPN, todas as suas conexões online são criptografadas, o que significa que os seus dados pessoais estão seguros contra hackers e outros usuários mal-intencionados. Isso é particularmente importante quando se trata de operações online envolvendo transações financeiras, como apostas desportivas.

Além disso, o uso de uma VPN também é essencial se você quiser manter a privacidade online no Brasil. Isso é especialmente importante se você for manter suas preferênências de apostas desportivas e informações financeiras privadas. Ao usar uma VNP, seus ISP e outras entidades que monitorizam a atividade online, não serão capazes de monitorar

Moda e estilo com economia
A Bet Ket, loja online de roupas femininas, oferece frete grátis para todo o Brasil, além de incríveis promoções e descontos. Com uma ampla variedade de produtos, a loja oferece opções para todos os estilos e ocasiões.
A Bet Ket está sempre atualizada com as últimas tendências da moda, oferecendo peças modernas e versáteis. Os clientes encontram no site vestidos, blusas, calças, saias, shorts e muito mais. Além disso, a loja também conta com uma linha de acessórios, como bolsas, chapéus e óculos de sol.
As promoções da Bet Ket são imperdíveis. A loja oferece descontos de até 50% em netbet opinie produtos selecionados, além de cupons exclusivos para novos clientes e compras acima de determinado valor. Além disso, a Bet Ket realiza promoções especiais em netbet opinie datas comemorativas, como Black Friday e Dia das Mães.
Comprar na Bet Ket é fácil e seguro. O site possui um sistema de pagamentos protegido e

oferece diversas opções de entrega, incluindo Sedex e PAC. A loja também conta com um atendimento ao cliente ágil e eficiente, pronto para tirar dúvidas e resolver problemas.

União Europeia aprova início de negociações de adesão com Ucrânia e Moldávia

A União Europeia (UE) formalizou a aprovação do início de negociações de adesão com a Ucrânia e a Moldávia, marcando uma etapa importante no processo de integração desses dois países à bloco de 27 nações.

- **Início de negociações de adesão à UE é um passo histórico para Ucrânia e Moldávia**A União Europeia (UE) formalizou a aprovação do início de negociações de adesão com a Ucrânia e a Moldávia, outro passo no longo processo de integração desses dois países à bloco de 27 nações. O presidente ucraniano, Volodymyr Zelenskiy, descreveu o início das negociações como um "passo histórico".
- **Ataques com drones ucranianos atingem alvos russos**Os drones ucranianos atingiram quatro refinarias de petróleo, estações de radar e outros alvos militares russos netbet opinie um ataque nas primeiras horas de sexta-feira, afirmou o exército ucraniano. Os ataques ocorreram netbet opinie quatro refinarias de petróleo localizadas nas regiões de Krasnodar, Afipsky, Ilsky e Astrakhan.
- **Ataques ucranianos deixam duas subestações elétricas fora de serviço netbet opinie Enerhodar**Os ataques de drones ucranianos atingiram duas subestações elétricas netbet opinie Enerhodar, a cidade que serve à usina nuclear de Zaporizhzhia, deixando-as fora de serviço e privando a maioria dos moradores de energia, de acordo com funcionários russos.
- **Reinforcementos ucranianos enviados para Chasiv Yar**As forças ucranianas estão enviando reforços para Chasiv Yar, um importante ponto estratégico na região de Donetsk, cuja captura poderia acelerar as ofensivas russas mais fundo no território industrial.
- **EUA enviará mísseis Patriot para Ucrânia**Os Estados Unidos enviarão os últimos mísseis Patriot "rolando da linha de produção" para a Ucrânia netbet opinie vez de outros países que os encomendaram, afirmou a Casa Branca.
- **Pentágono aprova uso de mísseis US-fornecidos pela Ucrânia para atacar alvos na Rússia**O Pentágono deu aprovação à Ucrânia para usar mísseis US-fornecidos para atacar alvos na Rússia, se atuando netbet opinie legítima defesa.
- **Zelenskiy anuncia medidas para proteger sistema energético ucraniano**O presidente ucraniano, Volodymyr Zelenskiy, anunciou medidas para proteger o sistema energético ucraniano, incluindo a proteção de centrais elétricas sob fogo russo e o desenvolvimento de fontes de energia alternativa e renovável.
